Ecommerce Vision & Strategy

Deliver trust where digital commerce happens.

Original presentation

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

VISION / DIRECTION

Embrace the opportunity. Do more than police it.

Deliver trust online

- Serve ecommerce platforms, merchants and consumers as assurance serves physical trade.
- Trust is both more important and harder to build in a virtual transaction.
- The universality of ecommerce exposes assurance providers to new businesses and consumers.

Use the terms consistently

Customer: the provider’s business client.

Consumer: the end-user of a product or service, usually a member of the public.

Embrace the commercial opportunity to build confidence, rather than treating online trade only as something to police.

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

END-STATE VISION

Build online trust as a connected platform.

Five independent, data-rich elements can combine over time. Trust becomes more significant as the stakes rise.

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

Put useful assurance on the product page.

Consumer-facing information

- Merchant websites and product-detail pages become channels into the trust ecosystem.
- A clear indicator can open consumer-friendly, localised product information and test evidence.
- Explore visual product ratings and their role alongside reviews in product discovery.
- Explain what the evidence covers and offer access to further information.

Controls designed into the service

- Customer opt-in API.
- Authenticated watermark.
- Time-limited electronic signature.
- Monitoring against misuse.

Redrawn concept: a product page connects to an evidence record, not a generic corporate badge.

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

ELEMENT 2 · SERVICE COMMERCE

Make specialist services accessible online.

For customers and consumers

- Order services, equipment, business-intelligence data and reports.
- Talk to qualified staff or bots; access an existing client dashboard.
- Use a product barcode to reach information, FAQs and product questions.
- Offer optional lifestyle inputs and relevant articles or reports.

Commercial model and operations

- Dynamic, fixed, pay-per-use or revenue-share pricing.
- Data subscriptions, individual reports and trial views.
- Separate business and consumer registration and verification.
- Mobile and CRM support; monitored chat.
- Machine translation, localisation and regional access controls.

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

ELEMENT 3 · TRUST COMMUNITY

Build an independent, moderated forum.

Purpose and content

- An authoritative, collaborative community with TIC-industry oversight.
- Curated, fact-based and impartial material on safety, ethics, environment and performance; use video where helpful.
- Specialist-supported, without corporate branding.
- No financial transactions on the forum.
- Relevant content and lasting interactions support organic discovery.

Participation and service model

- Questions, comments, voting and live chat; ideas for crowd-funded testing and inspection.
- Super-user nomination and selection; moderation, archives, alerts and tailored notifications.
- Links to buyer reviews and to the wider ecosystem.
- Explore advertising, crowd-testing and aggregated-data opportunities around the ecosystem.

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

ELEMENT 4 · EXTERNAL CONNECTIONS

Reach the places where trust is discussed.

Connect to relevant audiences

- Social media, consumer reviews and recommendations.
- NGOs, regulatory sources, legal and government information.
- Affiliate networks and targeted paid-search campaigns.
- In-house compliance information and other useful tools.

Capabilities needed

- SEO and search-marketing expertise.
- Specialist teams generating content and identifying relevant websites.
- A country-specific approach.
- Target sectors and geographies where the provider has appropriate competence.

Links should bring useful information and relevant visitors into the ecosystem—not substitute attention for evidence.

Conceptual strategy, not a record of a deployed service. Layout redrawn and company-specific labels generalised.

CONNECTED TRUST ECOSYSTEM

Connections make the data more useful.

Data-rich · Interactive · Real-time · Revenue-generating. Specialist internal knowledge is a distinctive input.
